Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```c
#include<stdio.h>
int main(){
    int n,x;
    scanf("%d",&n);
    int a[n];
    for(int i=0;i<n;i++){
        scanf("%d",&a[i]);
    }
    scanf("%d",&x);
    int left=0;
    int right=n-1;
    int found=0;
    while(left<right){
        int sum=a[left]+a[right];
        if(sum==x){
            printf("%d\n",a[left]);
            printf("%d\n",a[right]);
            found=1;
            break;
        }
        else if(sum<x){
            left++;
        }
        else{
            right--;
        }
    }
    if(found==0){
        printf("No");
    }
    return 0;
}
```
